Whomever It May Concern:

I, William M. Coopman, Illinois Registered Professional Engineer, do hereby certify to the following statements as herein-after presented:

In reviewing the matter of "storage facility closure" for Export Packaging Co., I find no drums of waste 1-1-1 trichloroethane on their premises which are more than ninety days old. This meets Part 4 of the basic RCRA Closure Plan; 35 Ill. Adm. Code 725.212.

Further, in examining the area where drums of waste were stored, I find that area clean with no evidence of leakage. Since the waste drum storage area was inside a concrete block building with concrete flooring, and there being no spillage or leakage, I am of the opinion that there would be no hazardous waste constituents, leachate, or decomposed waste product to the ground, surface water, or atmosphere. No post closure care would be necessary as all barrels older than the ninety days allowable have been disposed of legally and the area needs no further maintenance.

Respectfully submitted,

William M. Coopman  
Illinois Registered Professional  
Engineer No. 1499
